2···	

- 4. The coal deposits near Konin extend in a northerly direction from the present open-cast mine beyond take Goslawski. It is estimated that the deposits will last for 70 to 120 years, not taking into account other coal deposits farther to the west and in the Klodawa area. For the time being, no plans have been made for the mining of coal deposits below take Goslawski because such operations would affect the lifetime of the power station, which for its water supply depends on this take and other takes in the vicinity.
- 5. The water intake plant will be built on Lake Goslawski and designed for a capacity of 22,000 cubic meters perhour. The water will be discharged with a loss of three percent into Lake Fanthow. Difficulties will arise from the fact that the precooling and recooling plants must be fed with water having a maximum temperature of 15° C. In the summer months it will therefore be necessary to admix fresh water to the water of the lake in order to reach the prescribed temperature. This may necessitate the en argement of the water plant at Konin.
- 6. At the conclusion of the first round of negotiations in Poland the German engineers were told that future negotiations would have to be conducted with Director General Sniegon of the Brown Coal Combine in Konin and that the two ministries mentioned would only intervene if matters of principle were to be decided. Completion dates would be controlled by the State Planning Office.
- 7. Between 24 and 27 August 1953, an engineer of the Designs Bureau for Industrial Construction Work in Berlin again negotiated in Poland, i.e. on 24 and 25 August at the Ministry of the Power Industry, and on 26 August at the Designs Office of the Polish Coal Industry on Alleja Stalina at Stalinogrod (Katowice), and on 27 August again at the Ministry of the Power Industry. The negotiations were attended by gentlemen mentioned in paragraph 2 of the present report in addition to Mrs Ritter of the State Commission for Economic Flanning. In Katowice the designs made by the Germans were harmonized with the wishes of the Polish Designs Office.

  The Polish Designs Office lacked the experts re-25X1 quired for the designing of large coal plants. Previously, coal deposits were mostly opened up by German mining engineers.
